  Analyze the PDP Data provided and sort it into different categories on the basis of various parameters as overmerge display data, variant issue, egregious issues or maybe policy violation issues. Further, this data is transferred to the fixing department to make the changes and corrections that are proposed by PDP Reviewer.

Projects

- **IMDb Clone** | `</>` | 🔗
  A completely Front-end based Project trying to replicate IMDb website. This project uses the TMDB API providing access to a huge database of Movies and their details. Built on pure Vanilla JS without using any Frontend or CSS frameworks.
  The website has 3 pages:-
  Homepage - Displays all recent and popular movies with a few options to play around with.
  Movie Page - Displays details of a specific(selected by the user) movie with a button to play the trailer of the movie there itself.
  My List Page - User can add movies to their favorite list. Those movies will be displayed here.

Skills

- Front-end Development, JavaScript, HTML, CSS, Java, SQL, Photoshop

- Git & Github, Unix and RHEL Administration, Cloud Computing, ITIL Implementation

- Also familiar with – Python, Kotlin, Android Development, SolidWorks, CAD

Licenses & certifications

- Microsoft Certified | **Azure Fundamentals – AZ 900 - Certification Number: H842-1307** 🔗
